SAVE THE PLANET!!!!
Prevent global warming!!!!

GLOBAL WARMING

By Edward Harvey

WHAT IS GLOBAL WARMING?

Unfortunately, global warming is destroying the earth. Global warming is the rise in temperature of the earth's surface.

WHY IS GLOBAL WARMING BAD?

If global warming carries on, droughts could become more frequent and happen in more places because the sun will shine brighter so it will heat up land. In the future, weather could be stronger so houses could be destroyed, leaving families having poorer lives. Some sea levels could rise so countries could be flooded.

WHAT WILL HAPPEN IF WE DON'T HELP?

If we don't reduce our energy, the earth will heat up and the earth's atmosphere will be destroyed, eventually the earth will get so hot people and animals will no longer be able to live on it. If we don't try to use less electricity, our homes might be flooded and we will have nowhere else to live.

WHAT WILL HAPPEN TO LAND AND ANIMALS?

The ice will melt, causing extinction to penguins and polar bears, so there will be no more ice animals. When the ice melts, floods will become more frequent in many areas so some people and animals will have to move house.

WHAT WILL HAPPEN IF WE DO HELP?

People can clean the world and join the fight against global warming by using less energy and gas. What do you think you could do to help?
