

Global Warming!!!

By Ellie King

What is Global Warming?

Global warming is destroying the polar bears and penguins because we are using too much gas, electricity and are causing green house gases. The gases are making holes in the ozone layer which is heating up the world. Because of this, the ice bergs are melting.

What will it bring?

Global warming is making tornadoes, hurricanes and tsunamis. Which is why we must slow down global warming.

What effects could happen?

- Sea levels would rise.
- Cities would flood.
- Lakes and rivers would dry up.
- Less water would be available to drink.

Please help us slow down global warming, don't just do it for you do it for everyone.

What can we do?

We can re-use and recycle bottles ,cans, newspaper and plastic bags, we can switch lights off when we leave a room, we can use the

car less and we can take showers instead of baths.
