

# GLOBAL WARMING

By Isabella

*Unfortunately, we can not stop global warming. Global warming is a rise in temperature of the earths surface . The earth is getting warmer by 1 degree every hundred years and this is causing icebergs to melt and more extreme weather.*

## What could happen?

Hurricanes, tornadoes and other storms would be more common. Meanwhile, icebergs will melt and pole bears will lose their homes.

## What is Global warming?

Global warming is pollution sent up in the air and making holes in the ozone-layer so sunlight is trapped.

## What can people do?

People can reduce it by using solar power and turning rubbish into gas . Stop using electricity too much!

## SUMMARY

People can prevent global warming and save the world from suffering.
