

global warming.
oh no.

Global Warming

By Patrick Forster

Global Warming is a rise in temperature on earth due to oil, gas and fuel burning and giving off carbon dioxide and other gases.

Some animals have already had to leave their homes because of the rise in temperature on earth. This is caused by burning gases polluting the earth and is called Global Warming.

What Will Happen If Global Warming Continues?

Some scientists say if Global Warming continues many types of animals will become endangered. Other scientists say if Global Warming continues there will be a giant tidal wave and wipe out many cities. If anything happens it will be disastrous and people will need to think of a plan to prevent it!!!

Pollution

Oil ,gas ,coal and fuel burning causes pollution which is sent up to the sky and makes holes in the atmosphere. This leads to the sun shining through the holes and making the earth much hotter.

How can You Slow Global Warming Down?

To slow Global Warming down try to take shorter showers, turn off lights when your not using them, bike or walk instead of the car and plant trees.

Summary

So why don't you slow Global Warming down by turning of your television etc. If there are that many reasons to slow Global Warming down what are people waiting for!?!?!?!?
