

## GLOBAL WARMING IS THREATENING THE WORLD

Despite the fact that fuels help us they are causing pollution which is making the earth warmer. This is called global warming. During the last 100 years the earth has been getting hotter and as a result the weather has become more EXTREME

### WHAT WILL IT BRING?

Because the earth is getting warmer the rise in temperature is causing the ice in the poles to melt. Sea levels will rise because of this. This will make low land become flooded such as beaches. There will become more storms, tornadoes and hurricanes.

### WHAT CAN WE DO?

We can use less fossil fuel products such as petrol, gas and electricity and help by using shorter showers and no bathes! Use the car less so we can reduce the speed of global warming.

### WHAT EFFECT WILL IT HAVE?

Part of the Earth will flood! Many people will have to move house to higher ground. Floods will threaten the lower lands, houses will flood and be destroyed. Some lower land animals will adapt, other will become extinct.

### SUMMARY

In this report you now know how to stop global warming. Stop the speed of global warming. You will save lives!
